

TECHNOLOGY HIGHLIGHT ALPINE SL GTX®:

LESS WEIGHT, MORE PERFORMANCE.

FUNCTIONAL NEOPRENE GAITER

The elastic neoprene gaiter protects the foot from invading dirt and stones, therefore creating a perfect edging of the boot.

LOWA REPTEX

In the animal world reptiles have got a protecting armour for their delicate skin. In the same way LOWA REPTEX protects the shoe's upper from harm caused by for example sharp rock edges. This ideal cover significantly boosts the performance on the mountain while reducing the overall weight in comparison to rubber.

VIBRAM® LITEBASE TECHNOLOGY

LITEBASE is the new innovative technology developed by Vibram®. It allows a significant reduction of the total weight of the sole, without affecting performances.

CLOSE TO THE GROUND

CLOSE TO THE ROCK

CLOSE TO THE GROUND & CLOSE TO THE ROCK

Secure footing, sensibility and grip are created in particular by the space between the foot and the ground. For this reason, the technologies known as CLOSE TO THE GROUND and CLOSE TO THE ROCK are designed in a way that reduces the space between the ground or the rock to the greatest extent possible.
